

DevConnect

DevConnect acts as a bridge between the merchant's systems and the Regal Technologies ACH & credit card payment processors. Payment data is collected online from the consumer & submitted for real-time authorization.

DEVCONNECT OVERVIEW

Payment gateways facilitate electronic commerce by enabling merchants to accept ACH, check and credit cards as methods of payment for goods and services sold online. DevConnect acts as a bridge between the merchant's systems and the Regal Technologies ACH and credit card payment processors. Payment data is collected by the merchant's systems and submitted to the Regal Technologies payment gateway for real-time authorization.

DevConnect is the recommended integration method for merchants who have the capability to initiate both client and server side SSL connections. This method offers the merchant a high degree of security and control because transaction data is submitted to the gateway over a secure server-to-server connection that is initiated by the merchant's server. Since the merchant server will receive a response directly from the Regal Technologies gateway, the merchant has more control over the response to the end customer.

AVAILABLE SOLUTIONS

DevConnect APIs support multiple development languages and platforms, including:

- Programming Languages: C#, J#, ASP.NET, VB.NET, ASP, Delphi, Perl, PHP, Visual Basic, C/C++, Java, Cold Fusion, and Miva.
